

Define Your Product:

What problem does your product website solve or address?

The website helps understand the objective of our company and our program by educating visitors about us and the app itself. It also teaches them how to use the app. The app solves the problem of struggling to figure out what to eat for people with different eating preferences.

What is your product idea? How does your website support this idea and help solve the problem?

PickEatz helps users figure out what to eat when everyone has a different eating preference. Some people have allergies, others are just picky, and that's ok because PickEatz will settle on something everyone can enjoy without having to go to different places/cook different meals. The website will describe how the software works and demonstrate its use cases, while also giving the user the aesthetic or atmosphere of an easy decision about food.

What type of website are you building? (i.e., e-commerce, brochure, portfolio, media, nonprofit, etc.)

This will be a brochure website, which allows us to display basic information about the software. It also teaches the user everything they would need to know about how to use it and if the app is for them.

What is your mission statement? Summarize what your product does, who it's for, and why it matters.

PickEatz makes eating with friends and family easier by picking a plate everyone will enjoy. Based on collective users' eating preferences, the app will find recipes or restaurants that have something for everyone. This is for people that have a decent sized friend group or family and can't seem to agree on what to eat. We want everyone to enjoy food together and save your time and money.

Profile Of Target Audience:

Who is the primary audience that your product is trying to reach?

- What is the age range of your target audience?
 - 18-50
- What is the gender distribution?
 - I want to say about 50/50, but it can tip to either side and also have to account for non-binary users as well
- Which country do your visitors live in?
 - Majority will live in America and we'll probably get some users in Canada as well

- Do they live in urban or rural areas?
 - More urban than rural for sure
- What is the average income of visitors?
 - Around 40-50k yearly salary on average
- What level of education do they have?
 - Ranging from high school diploma/GED to college degrees
- What is their marital or family status?
 - Family size of at least 3-4, can be married or single
- What is their occupation?
 - Full/part time work, something time consuming
- How many hours do they work per week?
 - Around 20-40
- How often do they use the web?
 - I would say a good average is moderately
- What kind of device do they use to access the web?
 - Majority of the time would be the phone, maybe a computer here and there for work

Fictional Visitors:

Name	Gender	Age	Location	Occupation	Income	Web Use
Gerard	Male	43, Single father, 4 kids varying ages	US. Midwest	Corporate office 9-5	90k yearly	Moderate (mostly for facebook)

Name	Gender	Age	Location	Occupation	Income	Web Use
Lupa	Female	20	US. East coast	College student, living with friends, part time job	30k yearly	Daily

Name	Gender	Age	Location	Occupation	Income	Web Use
Kairi	Female	34	Canada	Amazon Service Desk	50k yearly	Daily

Reasons For Visiting the Site:

Gerard - Was interested in figuring out how to cook meals that would satisfy his kids, so stumbled across the site and decided to learn more about how the app works to see if it would help him save time/money

Lupa - Her and her friends can never decide what to eat when they go out and so she thought the app might be a fun way of picking something everyone would like, so she wants to see how to set it up and use it

Kairi - Works long hours at Amazon and can't find much time to figure out what to cook for her family that's visiting, so she started looking into the app to see if it would help settle on a dish

Website Requirements:

Purpose & Goals -

- What is the primary goal of your website?
 - To educate users on how to use the app, what the app/our company is about, and get them to download the app
- What is the most important action you want users to take on your site?
 - To create an account and download the app

Content & Features -

- What content and features are essential to help users achieve their goals? List critical pages and features
 - Featured page, FAQs page, Home page, About page, How to Use page, Contact page, Download Now page
- What will your homepage highlight? Think about the first impression and what visitors need to see right away.
 - The sleek design of the app and its ease of use, it should also convey the message that this is a food/meal app built around togetherness

Look & Feel -

- Do you have examples of websites that inspire your design? List 1–2 examples and what you like about them.

- [The Apple Website](#) is pretty modern and sleek and would be kinda what I'm going for, but maybe a little more warm and cozy. Their product/item pages are really nice, especially while scrolling, it just gives you a pleasant experience on the eyes. They also use a lot of contrast, which again helps with the eyes.
- How would you describe the overall style of your site?
 - I would go for a more modern and sleek design, but still have some elements that stand out for contrast. I also would try to go for something that evokes togetherness
- Do you have preferences for color, fonts, or imagery? If not, what mood or personality do you want the site to convey?
 - Definitely warm colors and almost old newspaper-esque fonts, or maybe some less serious fonts because it would cater to young adults as well. I just want to convey togetherness and ease of use

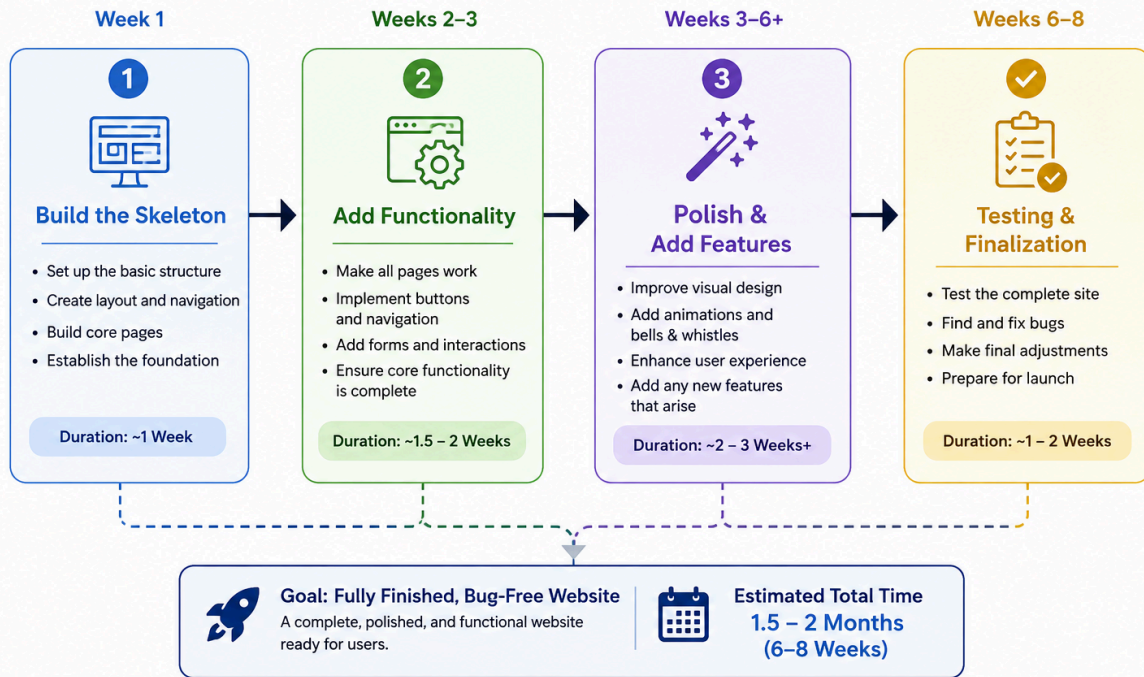

Design & Prototyping:

SDLC Approach & Timeline -

- I would use the Agile/Scrum development process. I use both because I technically don't have a team behind me but if I did we would use Scrum
 - This allows us to release software and get feedback quickly, continuous updates / adapting to customer needs, find or be notified of bugs quickly
- We would want to get the base site down (skeleton) in about a week and have all of its functionality like pages and buttons working about a week and a half to two weeks after that. From there we would spend the rest of our time making the site look pretty with bells and whistles and maybe adding anything else that arises during that time. I would say the site could be fully finished without bugs in a month in a half, to two months time

Website Development Timeline

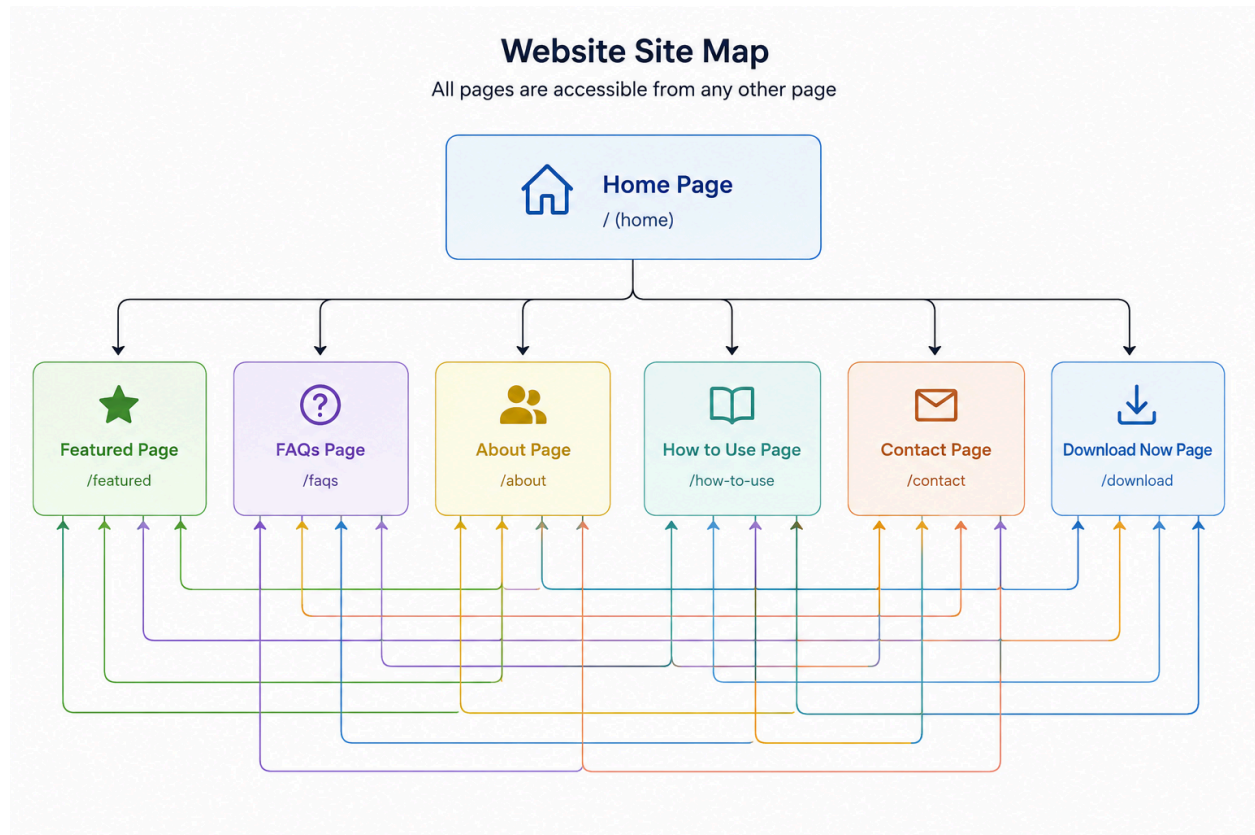

Estimated Total Time: 1.5 – 2 Months (6–8 Weeks)

Decide Together. Eat Happier.

PickEatz helps friends and families settle on what to eat in seconds — create quick group polls, filter by cuisine, and get instant suggestions everyone loves.

Download Now

**Group decisions made easy**

Start a poll, let everyone vote, and pick the winning option — no arguments, just dinner.

Core Features

**Group Polls**

Create instant polls with options, set time limits, and let everyone vote—results are displayed in real time.

 Live tally and tie-breakers

**Cuisine Filters**

Narrow choices by dietary needs, price, distance and cuisine so everyone gets options they love.

 Customizable filters for every group

**Instant**

Get smart suggestions based on group history, time of day, and popular picks nearby.

 AI-assisted suggestions with context

Everything you need to get eat-outs planned with zero fuss.

How to Use PickEatz — From install to group decision in minutes

Quick, clear steps to set up a group, gather options, invite friends, and run a fast, fair vote. Follow the flow below or jump to the demo and download links on the right.

[Start a Demo](#)

2:10 Quick walkthrough

Quick Resources

- Concise 2-minute video walkthrough
- Moderator best-practices checklist
- FAQ: Anonymous voting & time limits

Illustrated 4-Step Flow

1. Create a Group
Name your group, choose a theme, and set privacy.

Tip: Use a concise name so friends recognize it quickly.
Tip: Set privacy to 'Invite only' for private dinners.

2. Add Options
List restaurants, dishes, or meeting times.

Use images or short descriptions to help voters decide.
Tip: Limit to 6 options for a fast decision.

3. Invite Friends
Share link or send invites directly.

Invite by link, SMS, or email for faster RSVPs.
Tip: Remind participants with a second message near deadline.

4. Vote & Decide
Cast votes, view live totals, and confirm choice.

Option to make voting anonymous or public.
Tip: Use time limits for quick weekend plans.

Our Mission: Make Great Food Easy for Everyone

PickEatz connects local kitchens, delivery crews, and communities to create sustainable access to delicious meals. We champion fair pay for cooks, transparent sourcing, and neighborhood partnerships that keep food vibrant and local.

[Join the Community](#)

Sustainable Sourcing
Partnering with local farms since 2018

Fair Pay
Transparent commission model for cooks

Our Story & Timeline

- 2017**
Founders met at a community dinner and imagined a better way to connect home cooks with neighbors.
- 2019**
Pilot launched in Portland, onboarding 30 cooks and 5 micro-farms for ingredient sourcing.

How PickEatz Began

The idea for PickEatz started during a potluck where founders saw the power of food to build connections. They sketched a simple app to connect cooks with neighbors and tested it in one neighborhood. Early success proved demand for hyper-local menus, and the team focused on ethical sourcing, pay transparency, and low-emission delivery methods.

Community-first features:

- Neighborhood chapters for shared pickups
- Transparent cook earnings dashboard

Accessibility -

- For people with audio impairments, we will implement text transcripts and video captioning for any videos/tutorials

- For people with visual impairments, we will implement images with text descriptions, contrasting colors and varying font sizes
- For people with motor impairments, we will make the website fully accessible with just a keyboard/mouse
- For people with cognitive impairments, we will make sure all content is clear and the UI stays consistent throughout the entire site
