Decision Tree

Describe a decision process that you will implement on your product website.

- First node: If agreePercent <= 30
    - This node checks if the agree percentage between people is less than 30% and if it is, it will display a message saying something like, “It will be really hard for you all to agree on something to eat
- Second node: If agreePercent < 80 && agreePercent > 30
    - This node checks if the agree percentage between people is less than 80% but greater than 30% and if it is, it will display a message saying something like, “It might be a little difficult to decide, but you guys will get there eventually”
- Third node: if agreePercent >= 80
    - This node checks if the agree percentage is greater than 80% and if it is, then it will display a message like, “You all should be able to agree quickly”

Flowchart

Draw a flowchart of your decision tree using the flowchart conventions shown in the examples above.
